Juan José Arbeláez Castro

• FULL STACK DEVELOPER · 3 YEARS OF EXPERIENCE

PROFESSIONAL SUMMARY

Full Stack Developer with 3 years of experience building end-to-end web applications for corporate clients. I work with **.NET (C#), ASP.NET Core, Python, JavaScript, and SQL Server**, with hands-on experience designing operational dashboards and processing real-time data. I joined Movi Software as an intern in June 2023 and was hired on a permanent contract in January 2024 based on performance, where I currently collaborate with a team of 10+ developers serving enterprise clients.

PROFESSIONAL EXPERIENCE

Software Developer

JUN 2023 — PRESENT

Movi Software · Medellín, Colombia · Clients: Celsia · ISA Intercolombia

End-to-end development of web platforms for monitoring and data processing in mission-critical operations. Initially joined as an intern and hired on a permanent contract based on performance.

- ▶ **Built** the main interface in **vanilla JavaScript and jQuery** that centralizes the status of **1,578 devices** distributed across **68 substations** and 5 operational zones, supporting **10+ device references** from different manufacturers with real-time updates.
- ▶ **Developed** the data processing pipeline in **.NET (C#) and Python** that ingests telemetry files and generates **87+ charts per event** (fault impedance, symmetrical components, RMS, phase angle and magnitude), used to diagnose faults with very short detection times.
- ▶ **Designed** REST endpoints with **ASP.NET Core (Minimal APIs)** connecting historical and real-time data sources, powering online/offline communication reports and operational diagnostics.
- ▶ **Optimized** page load times across the platform navigation, reducing friction for **dozens of operators** using the tool daily during shift operations.
- ▶ **Implemented** automated end-to-end tests with **Selenium** to validate critical frontend flows and ensure release stability between deployments.
- ▶ **Modeled** and queried **SQL Server** databases with complex joins and aggregations over simulation and real-operation data for comparative, traceable reports.
- ▶ **Integrated GitHub Copilot, ChatGPT, and Cursor** into the development cycle, accelerating boilerplate code, test generation, and AI-assisted pull request reviews.
- ▶ **Participated** in mockup definition and visual hierarchy validation with non-technical stakeholders to ensure on-screen information supports operational decision-making.

KEY ACHIEVEMENTS

PERFORMANCE-BASED RETENTION

Hired on a permanent contract after 6 months as an intern.

PRODUCT SCALE

1,500+ devices and 68 substations under real-time monitoring.

AI-POWERED PRODUCTIVITY

Copilot, ChatGPT, and Cursor integrated into PR and code review flow.

DUAL TECHNICAL DEGREE

Two technical programs completed in parallel (SENA + Politécnico Mayor) 2022-2023.

EDUCATION

Technical Degree in Application Programming

SENA · National Learning Service · 2022 – 2023

Programming fundamentals, relational databases, application development.

Technical Degree in Systems Support

Politécnico Mayor · 2022 – 2023

IT support, networking, systems foundations (completed in parallel with SENA).
